

## CAPABILITIES STATEMENT

Evidence to Practice is an agency dedicated to using comprehensive methods to help our clients improve health outcomes. Our services include designing and conducting research studies and program evaluations, project management, and stakeholder engagement. Our expertise is utilizing a versatile blend of qualitative, quantitative, and mixed research methods, resulting in strategic, comprehensive insights that help organizations enhance their value propositions and reach their business objectives.

## CORE COMPETENCIES

We help organizations advance healthcare and healthcare delivery through the following services:

Study design	Advisory board management
Data collection	Stakeholder engagement
Data analysis	Project management
Real-world data analysis	Manuscript development
Qualitative research	Literature reviews
Program evaluation	Landscape assessments & gap analyses

## SAMPLE PROJECTS

We tailor our services to meet our clients needs.

**Implementation Science:** We assisted a pharmaceutical company in assessing the viability of integrating social determinants of health screening into healthcare settings. Our qualitative analysis provided insights into the contextual nuances surrounding implementation and identified multi-level implementation barriers and facilitators.

**Data Analysis and Insight Development:** To assist a pharmaceutical company in understanding how and why patients interact with the healthcare system, we analyzed data collected through semi-structured interviews with patients and healthcare providers. Data were also analyzed based on demographic features to identify similarities and differences between different patient populations. Findings elucidated the barriers to a timely and accurate diagnosis. Results were used to inform the development of a targeted intervention to streamline diagnosis and increase access to improve equity.

**Program Evaluation:** Served as a co-investigator for the Real-World Accelerator to Improve the Standard of collection and curation of race and Ethnicity data in healthcare (RAISE), leading the program evaluation. Developed the program evaluation plan inclusive of evaluation questions, data collection tools, and analysis plan and engaged participants in individual, semi-structured interviews to assess program effectiveness.

**Stakeholder Engagement:** Served as the RAISE engagement manager. Responsibilities included building and maintaining relationships with collaborators, serving as the point of contact, facilitating communication, and proactively addressing issues.

**Program Management:** We supported the Reagan-Udall Foundation for the FDA, helping to streamline operations, improve efficiency, and contribute to the success of the IMEDS program. Our assistance included strategic planning, project coordination, and quality assurance, which optimized resource utilization and increased program effectiveness.

**Project Management:** The Reagan-Udall Foundation for the FDA partnered with two organizations to conduct observational studies using real-world data to understand the use of mAbs for COVID-19 treatment and the incidence of breakthrough infections in vaccinated patients. We managed the project and provided expertise in project management and real-world data to ensure successful completion.
